```
New polynucleotides encoding secreted human proteins - are derived from foetal kidney or adult retina cDNA libraries, used as, e.g. potential vaccines {\bf r}
```

Pages 51-52; 76pp; English

The sequence is that encoding a secreted protein from a human fetal kidney clone AK647. Such a sequence is predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haemastopoiesis regulating activity, tissue growth activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, and tumour invasion suppressor activity, and tumour inhibition activity. It is also stated to be useful for gene

The protein can be used for the treatment of diseases due to abnormal proliferation of smooth muscle. The polypeptides can be used according their inhibition of the proliferation of vascular smooth muscle cells, particularly in treating arteriosclerosis or re-narrowing by vascular endothelial thickening after percutaneous transluminal coronary angioplasty (PPCA), or myoma, haematopoietic cell-regulatory activity, cytokine activity, tissue generation/reparation activity, actin/inhibin activity, taxis receptor/ligand activity, blood coagulation/thrombotic activity, tunour inhibition, and as a nutrient.

Note: The open reading frame of this sequence, as well as the mature protein coding sequence are specifically claimed in claim 4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Local Sir

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
